QUALITY AND ENVIRONMENTAL POLICY

Our company's purpose is to fulfill our customers' expectations regarding quality, quantity and delivery time. We rely on the latest technology, a stable supply chain and a precise and swift communication to ensure the satisfaction of all parties involved as well as a cost-effective production. We apply the ISO9001/14001 Integrated Management System to accomplish this and are engaged to use and continuously improve this system.

Moreover, we continuously emphasize our quality and environmental goals through recurring trainings of our employees, periodical feedbacks to our suppliers, and regular information sharing to all stakeholders.

We commit to correspond to the related laws, customer requirements and any other regulations regarding quality and enviromental management. We furthermore strive to partner with suppliers who are similarly committed to follow the above-mentioned standards.
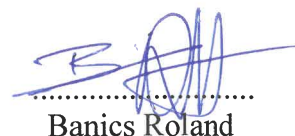

One of the most important parts of our environmental policy is to meet the latest global requirements; it is therefore crucial for us to support the paradigm shift from a linear economy to a circular economy for a sustainable future. Elanders is also dedicated to protect the environment and the ecosystem and to reduce the carbon footprint.

We take, revise and highlight the following continous improvement steps, for an environmentally conscious operation and a higher environment performance of our site:

- We prevent pollution and protect the natural resources
- We reduce the waste in mass production
- We monitor and aim to reduce energy consumption
- We manage environmental load through an enhanced waste management
- We follow-up on CO_2 emission reports, the quantity of which is pre-defined yearly
- We continually revise and aim to improve the operational impact on the environment
- Our technological resources are periodically examined to protect the environment
- We encourage our partners to be as environmentally conscious as we are.
